frameworkBy silviamvdeoThis is the kind of book I was looking for! It has a brief but clear 4 pages theoretical underpinning and then the bulk of the book is to analyse different ways in which technology can enhance learning in the EFL classroom. Units are organized around an aspect or skill and an array of practical activities using technology are explained step-by-step.2 of 2 people found the following review helpful. I like the organization of chapters into functions and learning objectivesBy DerekI like the organization of chapters into functions and learning objectives. Language Learning with Technology is for teachers interested in integrating technology into their classroom practice. The book contains 150 classroom activities for beginner to advanced level learners, incorporating a wide range of up-to-date technologies, such as mobile technologies and social networking. It puts pedagogy first, with the content organised around areas of language learning rather than technology types. Chapters cover language skills and the language areas of grammar, pronunciation and vocabulary, as well as project work and assessment and evaluation.
