**Graham Pryor : Managing Research Data (Facet Publications (All Titles as Published))** before purchasing it in order to gage whether or not it would be worth my time, and all praised Managing Research Data (Facet Publications (All Titles as Published)):

As digital information becomes increasingly prevalent, ensuring that such data remains discoverable, accessible, and intelligible to wider communities is of critical importance. This collection explores the issues and possibilities involved with data management in higher education and the information field. Illustrated with real-world examples throughout, the book offers practical advice on the components necessary to create a culture of effective data management, including skills required, legal obligations, strategies and management plans, and the data management infrastructure of specialists and services. LIS professionals and others working in higher education, along with researchers and policy makers, will find plenty of practical guidance in this timely book.

"This is an excellent book for anyone, not just information professionals, looking to 'introduce and familiarize' themselves with a complex and challenging, yet increasingly important topic. The book benefits from a prestigious line-up of knowledgeable authors, including those who are actually 'doing' research and research data management. As an edited volume it fits well together as a single entity even though written by a number of individuals: chapters reference other chapters and the reader is not left with a sense of a 'cobbled-together' mix of disparate topics from different people. The content can equally well be dipped into, as read from cover to cover." --Ariande

"The book provides a good introduction to RDM, but would also be of use to those readers very experienced in all matters to do with research data curation and management. I was impressed by the clarity and liveliness of the prose- inevitably any book on a relatively "dry" topic will have stretches of unexciting or technical prose, but this book's style of writing is in general mercifully free from this problem. I would recommend it for middle to senior library managers who are looking to dip their toe into the murky waters of RDM; senior university managers wanting a broad overview of RDM policy and practice; and to those already well-versed in RDM matters but wanting to know about recent developments in RDM, as well as its future." --SCONUL Focus

"...this collection belongs at every library considering or already implementing tools and services to help researchers manage their data better and comply with the bewildering array of data-related policies emerging from all quarters." --Collaborative Librarianship

About the Author  
Graham Pryor is Associate Director of the Digital Curation Centre, the UK's leading centre of expertise on digital data curation supporting the HE community.
