**From Indiana University Press : Missionaries of Science: The Rockefeller Foundation and Latin America (Philanthropic and Nonprofit Studies)** before purchasing it in order to gage whether or not it would be worth my time, and all praised *Missionaries of Science: The Rockefeller Foundation and Latin America (Philanthropic and Nonprofit Studies)*:

"A fascinating and important subject. [This book] is a first and has the potential of having a real directive force on a growing field of scholarly and public interest." Robert E. Kohler, author of *Partners in Science: Foundation Managers and Natural Scientists, 1900-1945* The Rockefeller Foundation's involvement with science, medicine, and agriculture in Latin America began with a regional survey in the 1920s and blossomed into full-fledged programs to fight yellow fever and other diseases, improve public health, encourage agricultural reform, and promote scientific education. These essays examine the Foundation's work in the region, its reception by local governments, and its legacy. The contributors are Marcos Cueto, Steven Williams, Armando Solorzano, Deborah Fitzgerald, Joseph Cotter, and Thomas F. Glick.

About the Author MARCOS CUETO is a researcher at the Instituto de Estudios Peruanos in Lima. His articles on Latin American science have been published in *Isis*, *The Bulletin of the History of Medicine*, *The Hispanic American Historical*, and other journals.
